

MegaTrainer

The part MD-Trainers of MegaDev only deals with developing of gametrainers. In detail, that are the MegaTrainer XL (MTXL), the MegaTrainer XE (MTXE) and the MegaTrainer eXperience (MT-X). In opposition to normal cheats, which are directly supported by games and therefore are implemented by the game-developer from the beginning, gametrainer are working by changing the RAM of the games to achieve the desired effect. The special feature of the MegaTrainers are that they don't support only one game like ordinary (game-)trainer but support a lot of games. Which they are in detail you can find in the trainers-overview. If you are not familiar with gametrainers or want to get an overview of a MegaTrainer you should read the corresponding FAQ. If you download the trainer the first time you have to download the setup-version to install all necessary (dll-)files on your computer. For later versions you only need the update to install changed/updated files. The setup-version copies three needed dll-files to your pc which are uninstalleable on demand along with the trainer.

The ending respectively the last development for the MegaTrainer XL was a code-generator to get directly MTXL-sourcecode and concurrently this was the starting signal for the MT-X. Due to the fact that it should be possible to extend the MegaTrainer eXperience in future by more than one person at the same time, what was impossible with the MTXL, we needed to source out the supported games to DLL-files. In most cases it should be possible to get the code for the DLLs from a newer, revised version of the mentioned code-generator and thus it should be possible for MegaDev-members without programming-experiences in C++ and C# to make updates for the trainer as well. In addition the well known hotkey-problem was solved at the beginning of the trainer development including first successful tests in games. One last problem was with the "useraccountcontrol" of Vista, which had to be solved before the release of a first beta-version.

General

This trainer was created with and for the original version of FIFA Manager 10 (by EA/BF). The supported gameversion is shown in the trainer. If a patch will be released which isn't listed in the trainer yet, we will try to make an update for this as soon as possible, because patches generally change the memory addresses and therefore the trainer does not work for other versions than indicated.

Important

All cheats were tested with the listed gameversions. Cheats with a star (*) in the row "Value" are only working, if you enter the hotkey for the value first. Sometimes are more than one cheat listed with * among each other. For these cheats the values are given after the last cheat of this group.

Key	ID	Cheat / Value hotkey	Value	Description
[L]Alt + X	-	Disable cheats	-	Disables the writing-effect of all cheats.
[L]Alt + Q	-	Close game	-	Immediately close the game and trainer.

		[L]Ctrl + 0	5 Bil.	
[L]Shift + A	M2	Manager-points	*	Activate this cheat (e.g. in the menu of the first team) and then switch to the career-menu. You should only use this cheat level-by-level and not to rush immediatly to level 19/20. So choose the next higher amount of points than yours and get the level-up by winning a match. As wished and drawed you should also use the steps for starlevels, because you may don't get the bonus for a starlevel, if you don't go to it by the game but the trainer. Use: Activate the cheat (e.g. in menu of first team) and switch to another menu (e.g. Career). Deactivate the trainer after it.
